Regional Watch

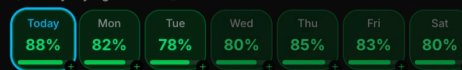

Upper Midwest - Stable

Updated 78m ago

Classic mid-July summer across the Upper Midwest: warm and humid with predominantly VFR conditions, but plan for isolated to scattered afternoon and evening thunderstorms each day. Mornings and early afternoons offer the best flying windows before cumulus buildups and outflow boundaries become the main aviation concern, especially over Wisconsin and Iowa.

Summer ridge with daily isolated convection

7-Day Flying Outlook

Days 1-3: NBM calibrated · Days 4-7: Extended outlook

Key Hazards (3)

Convective Convective IFR

Best Flying Window high confidence

Today → Mid-afternoon

VFR dominates before diurnal heating triggers isolated storms—best window for cross-country legs.

WX Score for every leg

A single 0–100 score weighs ceiling, visibility, wind, icing, and turbulence for your exact route.

Compare departure days

Score Thursday vs. Friday side by side. See which window is safer before you pack up.

Alerts when things change

PlaneWX monitors the forecast while you enjoy the show and emails you when your window shifts.
