

PlaneWX is the decision support system for general aviation. It gives pilots professional-grade tools and instills professional-grade habits that make flying safer.

PlaneWX is the risk-management loop for pilots who don't have a dispatcher.

For GA pilots without a chief pilot or dispatcher, PlaneWX is the risk-management loop that brings airline-style discipline (brief, assess, decide, debrief) to every flight. Unlike EFBs, which stop at weather data, and unlike paper FRAT and minimums sheets filed away after a checkride, it keeps personal minimums live on every briefing.

MISSION

Bring professional-grade tools and habits to general aviation so pilots flying on their own time, with families aboard, hold the same standard as paid pros.

VISION

GA closes the loop on every flight, and staying home is a legitimate outcome, not a failure. Desired outcome: measurably reduce GA accidents.

THE LOOP Four parts. Mentor sits alongside all four.

1

Weather Briefing

WX Score, from days out to hours out. Personal minimums front and center on every briefing.

2

FRAT

Pilot, Aircraft, enVironment, External. Unlocked in the final hours. Flags risk stacking when 3 or more factors are elevated, but never makes the call for you.

3

Fly or Stay

Staying is legitimate. The pilot decides. PlaneWX informs.

4

Self Debrief

Looks back at the flight and the FRAT you ran.

Mentor sits alongside all four parts of the loop. It is optional and opened by the pilot.

Personal minimums are structural. Every PlaneWX user has them, because the WX Score can't generate without them, and they show front and center on every briefing. FRAT is a chosen professional habit, and pilots can choose to require it before every flight.

PUBLIC PROOF POINTS Use only these. No invented stats.

2,200+

pilots in 35 countries

8.7 / 10average briefing feedback
(1,724 responses)**Up to 10%**5X5 insurance discount tied to PlaneWX
platform usage

Pilots who debrief a flight are about twice as likely to run a FRAT on the next one.

An association in PlaneWX data, not cause and effect.

HOW TO TALK ABOUT PLANEWX

SAY

- The risk-management loop
- Professional-grade discipline for pilots without a dispatcher
- Personal minimums on every briefing
- Staying home is a good decision

AVOID

- "Just another weather app"
- "Tells you whether to fly" (the pilot decides; PlaneWX informs)
- Any causal habit claim (do not say PlaneWX "builds a habit" over time)
- The old three-part framing; invented stats
